

# The Fierce Green Fire

A Newsletter of the Wofford College Environmental Studies Program

*Students in Professor Lane's ENVS 202 class choose letters that they will use to document the Northside through image and word.*

Volume 7, Issue 23

## *Southern Icons: A to Z and the Northside Landscape* by Professor John Lane

*Dr. Telligman's Sustainable Agriculture class harvested their radishes from the Goodall Garden during lab this week.*

This past Wednesday VMU professor, photographer, and Erskine Caldwell scholar Rob McDonald visited my ENVS 202 class to launch our fourth annual Northside "Third Landscape" project, an annual way of exploring our neighboring redevelopment through words and images. Rob led us in an informal walk through the Northside, along with Wofford professor and writer George Singleton. We paid particular attention to the Magnolia Cemetery, on the eastern edge of the neighborhood, and Rob reminded us how difficult it is to take photos of a cemetery since photographing them can easily devolve into clichés. Before we left the classroom each student chose a letter they will use to document the Northside through image and word.

That night Rob presented his "Southern Icons: A to Z" photography project, the inspiration for this project, to an enthusiastic

crowd in the Olin Teaching Theater. The Icons project presents 26 unusual and surprising images by Southern photographers and accompanying responses to them by Southern writers, including ones by professors Singleton and Lane. The questions proved lively and Rob assured us that defining the South is both difficult and creatively challenging, but he encouraged us all, as William Faulkner encouraged as well, to tell about it if we can.

## PROFILE OF THE WEEK:

### *Columbia University – Environmental Science and Policy MPA*

Columbia University offers a Masters in Public Administration degree in Environmental Science and Policy (ESP) through its School of International and Public Affairs (SIPA). Their goal is “to cultivate a new profession that manages earth systems in ways that will ensure the long-term viability of life on our planet.”

The MPA-ESP is an intense 12-month program that was begun in 2002 as a joint effort by SIPA and Columbia's Earth Institute.

The program emphasizes practical, science-based

policy and management learning to prepare students for leading positions in sustainability. Graduates leave with the skills and training to address the environmental challenges facing our planet. New York City is a hub for sustainability innovation that becomes an extension of the classroom.
